**Course Outcomes:**

After successful completion of course, the students should be able to

**CO 1: describe** knowledge of basics of instrumentation systems

**CO 2: classify** various display and recording devices

**CO 3: explain** instrument selection

**CO 4: describe** basic of control engineering and modeling

**CO 5: describe** the time response and frequency response analysis

Unit	Main Topics and Course Outlines	Hour(s)
<b>Unit-1</b>	<b>Generalized Instrumentation Systems:</b> Scope and necessity of instrumentation, Building blocks of instrumentation system, Various test signals, Errors, Sources and classification of errors.	4
	<b>Display and Recording Devices:</b> Operating mechanism in indicators, PMMC instruments, Moving iron instruments, Multi-meter, Dynamometer instruments.	8
	<b>Instrument Selection:</b> Factors affecting instrument selection, accuracy, precision, linearity, resolution, sensitivity, hysteresis, reliability, serviceability, Static and dynamic response, Environmental effects, Calibration of instruments.	8
<b>Unit-2</b>	<b>Introduction to control system:</b> Basic elements of a feedback control system, open loop, feedback and feed-forward, linear and non-linear, continuous and sampled-data control systems, digital control.	7
	<b>Mathematical models for Physical Systems:</b> Differential equations of simple mechanical, electrical, thermal, linearization of a non-linear mathematical model, transfer function derivation of physical systems, Block diagram, Signal flow graphs.	8
	<b>Time response and frequency response analysis:</b> Standard test signals, time response of first and second-order systems, time response specifications, steady-state errors and error constants, Stability of Systems, Concept of stability, condition for stability, Routh's Hurwitz's ability criteria, Co-relations between time and frequency response, frequency response specification.	7

**Theory:**

Unit	Main Topics and Course Outlines	Hour(s)
Unit-1	<b>General Description of Electrical Machines:</b> Constructional details of dc and ac machines, description of magnetic and electric circuits in cylindrical rotor and salient pole machines, mmf distribution of current carrying single and multiple coils; Armature winding as a current sheet, associated mmf and flux density waves; Torque as a function of flux and mmf.	10
	<b>DC Machines:</b> Emf and torque equations, interaction of the fields produced by field and armature circuits. Commutation. DC Generators: Methods of excitation, shunt, series and compound generators, characteristics, testing. DC Motors: Methods of excitation, characteristics, starting and speed control methods; Losses and their estimation, efficiency.	12
Unit-2	<b>Induction Machines:</b> Classification and constructional features of wound rotor and squirrel cage induction machines. Equivalent circuit, phasor diagram, torque-speed characteristic.	10
	<b>Synchronous Machines:</b> Classification and constructional features of salient pole and cylindrical rotor three-phase synchronous machine. Power-angle equations cylindrical rotor synchronous machines. Voltage regulation.	10

L	T	P	Credits	Hrs
3	0	0	3	3

**Course Outcomes:**

After successful completion of course, the students should be able to

**CO1: Observe** the characteristics and operation of the various semiconductor devices.

**CO2: Focus** on different power electronic converters.

**CO3: Classify** resonant converters and their control techniques.

**CO4: Describe** the practical application of the different type of converters.

**CO5: Explain** the operation and control of multilevel inverters.
